Edifil 214AsCH

Sheets of 400 stamps were printed, divided by horizontal and vertical lines into four sheets of 100 stamps. After these three issues, the gutters were considerably widened and the number of stamps per sheet were generally reduced to four panels of 25 stamps each.

160 issues of Centro de Hoja were issued between 1926 and the last in 1952 although the 4th in the series did not appear until 1936.
