

CPSA Membership Dues Computations

Total CPSA membership dues reported collected in Treasurer's Reports from July 1, 2003 to July1, 2009 (six years) = \$23,542

See copies of [Treasurer's Reports](#)

This comes to an average of $\$23,542 / 6 = \3924 per year

The CPSA membership list of [5 October 2009](#) indicates that there are 38 international members in the Society that should have paid dues of \$50 each. $38 \times \$50 = \1900 per year.

Thus $\$3974 - \$1900 = \$2074$ is the average yearly dues collected from U.S. Society members paying \$30 each.

$\$2074 / \$30 = 69$. This is the average number of U.S. Society members paying dues each year for the six year period covered.

69 U.S. members + 38 international members = average of 107 dues paying members per year for the six year period covered.

Yet the Society has been publishing [membership lists](#) in in the current Website, in the October 2009 ballot, in February 2007, and 12 May 2006 that all contain over 200 members.

Assuming that there has not been any theft of funds, the Society Officers have been intentionally misleading the membership and the advertisers in its publications about the number of dues paying members in the Society for the past 6 years.

On 12 October 2009 I entered [Item #15](#) in the "Your Opinions" forum on the CPSA Website pointing to these inconsistencies in the Treasurer's reports. To this date I have not received a response to that posting from the Society's Treasurer or any of its Officers. Previous requests for clarification of these inconsistencies in the Treasurer's reports were also ignored.
